Admission Data Compliance System

Name: Niranjan Hebli

Problem Statement

Candidate data entered via Google Sheets and Excel has no validation or eligibility checks, allowing unqualified applicants to pass through the recruitment pipeline undetected, wasting recruiter time, interview slots, and assessment budget before the problem is caught.

Impact of the Problem:

- Wasted Recruiter Hours: Scrolling through bad resumes instead of finding stars.
- Booked Interviews Lost: Calendar spots taken by wrong fits, good candidates wait or leave.
- Hiring Takes Forever: Weeks turn to months, best people get snatched by rivals.
- Team Gets Overworked: No new hires = current staff does extra, burns out.
- Missed Big Wins: Recruiters stuck in cleanup, not hunting top talent.
- Bad Hire Risk: Rushed decisions from backlog lead to hiring mistakes.

Proposed Solution

An integrated validation mutistep-wizard form and audit platform that enforces configurable admission rules, surfaces exceptions, and provides a tamper-evident audit trail.

Real-time validation

Client-side + server-side checks to catch errors at submission and reduce rework.

Rules configuration

Non-technical admins can edit rules, thresholds, and exception policies with versioning.

Auditable logs

Immutable audit records for every decision and override to satisfy compliance reviews.

Key Features

1. Multi- Step Wizard Form.
2. Strict validation for critical entries.
3. Soft rules and exception rationale.
4. Audits Log window
5. Export Audits in CSV
6. Dark Mode

Why multi-step form?

Multi-step wizards outperform single-page webpages for complex user flows by breaking tasks into digestible chunks, slashing cognitive overload that causes 70-80% abandonment on long forms

and personal details.

1 PERSONAL — 2 ACADEMIC — 3 INTERVIEW

FULL NAME

John Doe

EMAIL ADDRESS

john@example.com

PHONE NUMBER

10-digit mobile

Enter without country code

DATE OF BIRTH

dd/mm/yyyy

AADHAAR NUMBER

12-digit UID

Strictly 12 digits required
